MESA CASE 03 · AANGAN STUDIO · AS DEPLOYED 10 OCT 2026

Ring to Handoff — one enquiry, end to end

Rows are the actors, columns are the stages. Follow the numbers. A call arrives at any hour, Vaani answers it, and steps 6 through 11 run entirely in code — no model has a vote in any decision. The orange spine marks the pricing guardrail, the one failure this whole design exists to prevent.

ACTOR	TRIGGER what starts it	INPUT what comes in	CONTEXT what it knows	PROCESSING rules in code	OUTPUT what leaves
Caller `prospect · any hour`	1 **Rings Aangan.** About a third of enquiries arrive outside 10am–7pm, when the front desk is empty.				
Vaani `phone voice agent agent 42022c05`		2 **Answers in seconds**, 24/7. Speech to text on the caller's voice; one question at a time.	3 The five criteria, the Pune and PCMC area list, the six-week minimum, the out-of-scope list — and the deflection line. **No price figures.** `knowledge base lives on Vaani · not in this repo`	4 Asks about price → deflects, never disqualifies. Fits → offers a consultation. Doesn't fit → closes politely.	5 **Call ends** → post-call webhook POSTs the transcript, call metadata and 14 extracted fields. `14/14 field names verified against the live agent`

Our server
`Next.js 15.5.27 on Vercel`
		6 **Verifies HMAC-SHA256** over the raw body. Bad signature → 401, nothing written, nobody told.
		`api/vaani/webhook · lib/signature.ts`
			7 **Maps the payload. Never throws.** Junk coerced to null and flagged; the raw payload is kept verbatim.
			`lib/vaani.ts`
				8 **Service area** from a config file — out-of-area checked before in, unknown never becomes in-area.
				`lib/service-area.ts`
				9 **Five criteria re-derived in code.** Disagreement with the agent is flagged, never silently overridden.
				`lib/qualification.ts`
				10 **Transcript scanned for ₹ figures** in the agent's own turns — a leak it reported as clean still gets caught.
				`lib/pricing-leak.ts`
					11 **Writes the row, then notifies.** Idempotent on `vaani_call_id`, so a retry costs nothing and sends nothing twice.

Supabase `Postgres · ap-south-1`			12 **Caller history.** Earlier calls from the same number — repeat callers, dropped and redialled.		13 One row per enquiry, **never hard-deleted**. A second table makes sure no alert can fire twice. `leads · alert_log · RLS deny-all`
Email `Resend`				14 **Sweeps on a timer.** Unclaimed past 30 min in office hours reposts with its age; an escalation unacknowledged for 15 min alerts; two slow responses in a day wake the founder.	15 **Handoff card** to the designers — name, locality, property, scope, state, timeline, who decides, source, budget, flags, call time. Claim and Can't-take-it are signed one-click links. 16 **Never the phone number.** It sits behind Open record. Escalations go to a separate address with *I'm calling now* and no Claim button.
People `designers · founder`				17 **Two designers can tap Claim at once.** One conditional UPDATE settles it — exactly one wins, the other is told who holds it.	18 Designer calls back **within the hour** and gives the price at the consultation. The founder reads the dashboard and records whether the agent judged the call correctly.

WHAT EACH PART IS, AND ITS STATUS TODAY

COMPONENT	STATUS	EVIDENCE
Vaani phone agent	LIVE · NOT YET POINTED HERE	Agent 42022c05 reachable; its 14 extracted field names pinned as a test fixture. Its webhook field is still null.
Webhook receiver	LIVE	Unsigned POST to production returns 401. Health check reports signature_required.
Service-area gate	LIVE	79 tests, including Wakad/Warje, Kondhwa/Kothrud, Pimple Saudagar/Nilakh and "Talegaon, near Pune".
Five criteria in code	LIVE	57 tests run against the 40 real September enquiries, each checked against the outcome the front desk reached.
Pricing-leak scan	LIVE	Catches a per-sq-ft rate the agent reported as clean; ignores a budget the caller volunteered.
Email handoff	DRY-RUN	Renders and logs the exact card; sends once a Resend key is set. A test asserts no card can contain a phone number.
Supabase database	LIVE	120 leads stored — 40 real September enquiries plus 80 generated. Dashboard reads zero until the service-role key replaces the demo key.
Dashboard	LIVE	aangan-enquiry-system-noreply6.vercel.app — 401 without the password, 200 with it.
30-minute sweep	NEEDS A SCHEDULER	Vercel Hobby allows cron once per day, so the daily digest ships in vercel.json and the sweep is a bearer-token endpoint.

> Not in scope for this build: the voice agent's own prompt and knowledge base, which live on Vaani; WhatsApp; and the web form. The last two would enter at step 6 and run the same rules — `channel` is already an enum of phone, whatsapp and web_form, so they attach without a migration.

WHY IT'S SHAPED THIS WAY

Code decides. No model votes.

Vaani reports what the caller said. Every gate that follows — service area, the five criteria, the pricing scan — is plain code reading a config file, so a persuasive caller cannot talk a model past a rule. Where the agent and the code disagree, the lead is flagged for a human rather than quietly resolved either way.

Record before notify. Always.

The row is written before anything is sent, and notification failures are caught and logged rather than raised. If email is down the enquiry still exists. The one case that returns an error is a failed write — the one case where a retry is what we want.

The number is never in the message.

A shared inbox is read by several people and forwarded without thought. The callback number lives on the record, behind the dashboard password, and a guard runs over every rendered card — subject, text and HTML — and refuses to send one that contains anything number-shaped, including a number the agent transcribed into a scope note.

A leaked price is an incident, not a metric.

It alerts the founder the moment it is written, independent of where the lead is routed, and the dashboard shows it in red with *this must read zero*. Trusting the agent's own answer would be the agent grading its own homework, so the transcript is scanned too.

"I don't know" is never treated as "no".

An unrecognised locality is escalated to a human, not declined. Declining on a bad phone line is how a Kothrud project gets turned away.
